SKILLS

Cyber/SOC:
alert triage, incident response practice through Cybernet, CyberArk exposure, SOC Level 1 basics, threat analysis interest

Security Tools:
ArcSight, Check Point, Windows Event Viewer, Wireshark; SIEM/log investigation interest

Security Systems:
DDI/DLP/IPS interest, scanning systems, anomaly detection interest, permissions review and policy basics

Systems & Tools:
Linux, Windows, operating systems, Docker, Git/GitHub, REST APIs, AI tools for investigation/debugging

Programming/Data:
Python, Java, C/C++, SQL, JavaScript/TypeScript basics, NoSQL basics: MongoDB, Cassandra, VectorDB, ML basics

Networking:
TCP/IP, DNS, DHCP, FTP, reliable UDP, packet parsing, protocol and traffic analysis

AVAILABILITY

Shifts:
Open to 24/7 shifts, including nights, weekends and holidays.

MILITARY SERVICE

Israeli Air Force:
Tel Nof Airbase - Technician, head of batteries team, 2020-2023.

LANGUAGES

Languages:
Hebrew, English, Russian, Ukrainian

Junior Cyber Security CV

ABOUT ME

Computer Science student at Ariel University with hands-on experience in Python, Java, C/C++, SQL, Linux, Docker, networking, operating systems, packet analysis and technical troubleshooting. Practical cybersecurity exposure through TryHackMe, SOC Level 1 basics, incident response practice through Cybernet, CyberArk incident-response exposure, and tools such as ArcSight, Check Point, Windows Event Viewer and Wireshark. Interested in junior cyber security roles involving security-system implementation, permissions review, monitoring, incident response, log investigation, DLP/IPS/DDI environments, anomaly detection and defensive security operations.

EDUCATION

Ariel University, Ariel - B.Sc. in Computer Science 2024-2028
Second year Computer Science student. Academic average: 83.
Relevant coursework: Protection of Transfer Protocols, Operating Systems, Computer Networks, Data Structures & Algorithms, Probability & Statistics.

CERTIFICATES & CYBER PRACTICE

TryHackMe Pre Security Certificate, TryHackMe Cyber Security 101, TryHackMe SOC Level 1, AI course by Ben Rotenberg, Moshal Hack The Gap hackathon participant.

- Hands-on practice with incident-response workflows through Cybernet and CyberArk exposure; familiar with triage, logs, escalation mindset and documenting findings.
- Worked with ArcSight, Check Point and Windows Event Viewer; comfortable using AI tools to investigate issues independently and learn unfamiliar tools quickly.

PROJECTS

Packet Sniffer & MITM Lab
Built a custom packet sniffer and performed traffic-analysis/security lab simulations to understand packet flows, protocol behavior, suspicious activity and defensive monitoring concepts.

Networking Stack Project
Built core protocol simulations including DNS, DHCP, FTP and reliable UDP with packet parsing, protocol behavior analysis and Wireshark-based inspection.

ConcurrentBank - OS Capstone in C/Docker
Built a multi-process, multi-threaded banking simulation using C, Docker, fork(), pthreads, mutexes, pipes, signals, logs and graceful shutdown logic.

Voya - Full-Stack AI EdTech App
Built an AI-powered language-learning platform using Next.js, Prisma, SQLite, Tailwind CSS, REST/backend logic, user progress tracking and teacher analytics.

Java Excel-Like Spreadsheet Engine
Built an OOP spreadsheet-style system with cells, formula evaluation, dependency handling, error detection and structured testing/debugging.

ROLE-SPECIFIC CYBER FOCUS

- Strong match for junior cyber tasks around cyber project implementation, operation of defense technologies, monitoring, incident response and security documentation.
- Security investigation mindset: triage alerts, inspect logs/traffic, review permissions, identify indicators, escalate clearly and document findings.
- Relevant interests: DDI, DLP, IPS, scanning systems, anomaly detection, security policies, access management, cyber risk and organization-wide defense workflows.
- Able to collaborate with CISO/security teams, infrastructure teams and operations teams; fast learner with strong communication and responsibility.
